Midterm 1
(Practice)

- Complete the following problems. You may use any result from class you like, but if you cite a theorem be sure to verify the hypotheses are satisfied.

- This is a closed-book, closed-notes exam. No calculators or other electronic aids will be permitted.

- In order to receive full credit, please show all of your work and justify your answers. You do not need to simplify your answers unless specifically instructed to do so.

- If you need extra room, use the back sides of each page. If you must use extra paper, make sure to write your name on it and attach it to this exam. Do not unstaple or detach pages from this exam.

- Please sign the following:

  "On my honor, I have neither given nor received any aid on this examination. I have furthermore abided by all other aspects of the honor code with respect to this examination."

1. Complete each of the following sentences.

    (a) A function $f(x)$ is said to be *even* if

    (b) For a function $f(x)$ and a point $P = (a, f(a))$ on the graph of f, the tangent problem asks

    (c) For a function $f(x)$ and a point a in the domain of f, the derivative $f'(a)$ is defined to be

2. Determine whether each statement is true or false for arbitrary functions $f(x)$ and $g(x)$. **If the statement is true, cite your reasoning. If it is false, provide a counterexample.**

(a) If $\lim_{x \to 1} f(x) = 0$, then $\lim_{x \to 1} [(fg)(x)] = 0$.

(b) If $\lim_{x \to 0} g(x) = 0$, then $\lim_{x \to 0} \left[\dfrac{f(x)}{g(x)} \right]$ diverges.

(c) For any real number x, $\log(e^{2x+1}) = 2x + 1$.

3. For each of the following conditions, provide an example of a function $f(x)$ which satisfies the given condition. Unless otherwise indicated, you may express your function either with an explicit formula or by a graph.

(a) $f^{-1}(x)$ is a function.

(b) $f(0) = 3$ and $f^{-1}(0) = -3$

4. Let $f(x) = 3^{x^2+1}$.

(a) Find functions $g(x)$, $h(x)$, and $i(x)$ so that $f(x) = (g \circ h \circ i)(x)$.

(b) Compute $f^{-1}(x)$. (Note: $f^{-1}(x)$ may not be a function.)

5. Compute the following limits, if they exist. If a limit diverges, you may write "diverges."

(a) $\lim_{u \to -1} \dfrac{u^2 + 2u + 1}{4u^2 + 9u + 5}$

(b) $\lim_{h \to 0} \dfrac{(x+h)^{-2} - x^{-2}}{h}$

6. Let $f(x) = x^2 + 1$.

(a) The slope of the tangent line passing through the point $(1, 2)$ is given by a particular limit. Write this limit.

(b) Compute the limit in part (a) above.

(c) Use your result from (b) to write the equation for the tangent line to $f(x)$ at the point $(1, 2)$.

7. Are there any values of x such that $\cos x = x$? Explain your answer.
